

EMEA Release Summary

Intergraph NetWorks® 2.0.2001
H1 2020

Product overview

Intergraph NetWorks® from Hexagon's Safety & Infrastructure division provides secure, real-time access to location-based engineering and operational data and capabilities across the enterprise. By leveraging web services to simplify the development and maintenance of interfaces, integrations, and task-oriented portal and mobile applications, NetWorks connects the enterprise to Intergraph G/Technology® resources, making the network model available to planners, operations and call center personnel, field crews, and customers whenever and wherever needed.

Value propositions

NetWorks 2.0.2001 delivers new set of services for enhanced presentation of G/Technology data in NetWorks Portal. This version of Portal also delivers enhanced public API to integrate third-party add-ons.

Key enhancements summary

Note: The solutions in this announcement are only available in Europe, the Middle East, and Africa (EMEA). For the latest products in other areas, please contact your local account or sales representative.

Portal Enhancements

Intergraph NetWorks Portal now includes support for Areas Of Interest, Job selection, client rendering of G/Technology vector data from the new Vector Service.

Intergraph NetWorks Portal comes with an enhanced JavaScript API, simplified configuration of workspace files, translucency selection for legend entries and tighter integration with other NetWorks services via NetWorks Solution service.

Vector Service

New web service in NetWorks portfolio which provides G/Technology vector data in GeoJSON format. Support for master Deltas is included, via the new Deltas Service. Vector Service serves G/Technology legends with the same granularity as G/Designer.

Analytical Service

Added support for multi-parameter queries including Find Quick and Simple Attribute Queries. Optimized performance of multiple workflows.

Dialog Web Service

Added support for mapping OpenID Connect claim values to feature attributes when updating feature data from Portal.

Job Management Service

Added support for job search, finding pending edits and closing jobs.

WarmUp Service

Helper service used to ping other NetWorks services to keep them alive and ready for serving the users.

Licensing & distribution

NetWorks 2.0.2001 uses the Reprise licensing system. For more information, visit [Licensing Resources](#).

Additional information & resources

This release implies the end of the support for NetWorks Portal 1.3. All issues related to this product will be deferred to current and future releases of NetWorks Portal 2.0.
