

### I/Map Editor 14.00.00 Issues Resolved

	CR #	Product	Summary	Description / How to Reproduce
1.	1-75WMUO	I/Map Editor	Input Features section of log file does not provide count for Insert/Update Common Place Names	When an Insert/Update Common Place Names process is run, the number of input features is not listed in the log file under the Input Features: section.
2.	1-70TFR7	I/Map Editor	Cross Street is set to Null after IncBCN that modified the ZLev/TurnMask.	When a change in Increment BCN causes the cross street of a segment to be updated, the immediately affected segment is updated correctly but the other end of that segment's cross street is being set to Null when it should be left alone. Duplicate of 1-819NP3.
3.	1-7TUH1E	I/Map Editor	When BCN Dialog is made as small as possible, input field dropdown does not flyout to display contents	When the dialog is minimized, fields on the field mapping section are not flying out large enough to display the entire field contents.
4.	1-7WZNUD	I/Map Editor	Document potential font mismatch issue(s) when using 'Publish To Map File'	An SVG file contains the Arial Black font and the Bold setting is enabled. Although, there is not a Bold variant of Arial Black. The SVG symbol has a font definition of font-family="Arial Black" font-weight="bold". When the feature with this SVG symbol is published via the Publish to Map command it is given the Times New Roman font instead of Arial Black as the font is shown as 'Arial Black Bold' which does not exist. This CR is to document this behavior.
5.	1-7X49JI	I/Map Editor	'Publish to Map File' is not publishing Italic fonts from SVG symbols correctly	The 'Publish To Map File' command is not publishing Italic text from a SVG file correctly. Specifically when the embedded text in the SVG file is specified as (font-family="Arial" font-style="italic" font-weight="normal") the font from the SVG is published as Arial in the .map file instead of Arial Italic. By contrast a Text feature that is defined with an Arial Italic font is published correctly in the .map file as Arial Italic.
6.	1-834IIP	I/Map Editor	Publish to Map fails when linkage attribute is first column in table	Publish to Mapfile fails to properly populate mapfile linkage values when an attribute selected for linkage is the first column in its table (the first attribute in its feature class /record set)."
7.	1-83VV71	I/Map Editor	BCN does not run and logs 'got this far' msg when saved/mapped custom fields are not present in	<ol style="list-style-type: none"> <li>1. Open a saved GWS that has custom fields mapped.</li> <li>2. Connect to a different MSS that doesn't have at least one of the custom fields on segme.</li> </ol>

### I/Map Editor 14.00.00 Issues Resolved

			MSS	<p>3. Bring up BCN (comes up with MSS that has custom fields selected). Change the MSS to the new MSS.</p> <p>4. Run BCN and notice that it gives an error, "Error: Failed to prepare field mapping details for logging. Got this far:", above the field mappings section and BCN stops.</p>
8.	1-8B8LNH	I/Map Editor	I/MAP-Editor Edit Segments cannot process an "_" character in MUN and AREA Values	When the value MUN or AREA of the street segment contains the character "_", the search function in locate streets of I/MapEditor does not find the record. In other cases the string trailing the "_" in MUN's value is displayed in the field AREA of the result-list.
9.	1-8BGC1X	I/Map Editor	Error query does not display all the errors after saving and reopening GWS	Multiple error messages written to the error query when the insert of the ST_CD record was not successful causes the error query to fail when reloading.
10.	1-8I9NP3	I/Map Editor	Segment missing cross street after a split caused by insert of a segment in Incremental BCN.	When a change in Increment BCN causes the cross street of a segment to be updated, the immediately affected segment (ex. Split) is updated correctly but the other end of that segment's cross street is being set to Null when it should be left alone. Duplicate of 1-7OTFR7.
11.	1-8DXTWB	I/Map Editor	Missing linkage type in linkage type list	In Publish to Map, when a large number of legend entries are published, linkage types are not available in the dropdown.
12.	1-8DXTWP	I/Map Editor	No symbol name specified in the SVG legend entry	Altering the SVG symbol references in GeoMedia Professional causes the SVG symbol's filename to be removed. Publish to Map errors when an attempt is made to retrieve the filename.
13.	1-8FEMO3	I/Map Editor	Publish to Map – truncated message in message box	When numerous SVG files are missing, the message text exceeds the limit of the message box.
14.	1-8OLP21	I/Map Editor	Build CAD Centerline Network – Connection name containing a '.'	When a feature has a special character in the connection reloading the feature has issues in BCN.
15.	1-8OLP7H	I/Map Editor	Populate CAD Addresses - Connection name containing a '.'	When a feature has a special character in the connection reloading the feature has issues in PCA.
16.	1-8OLPA0	I/Map Editor	Export to Polygon - Connection name containing a '.'	Export to Polygon has an issue when attempting to reload the dialog after having saved the settings with an input feature that has a special character in the connection name. The filter dialog also fails to display.
