

inPURSUIT FBR 07.07.02 Issues Resolved

	CR #	Product	Summary	Description / How to Reproduce
1.	1-7KJA40	inPURSUIT FBR Client	Checking business in the FBR does not map to the RMS.	In the incident Form - Vehicle section - Registered Owner, when you select Business and add the business name this should create a new master name record in the RMS with the name type selected as a business.
2.	1-8PVTC8	inPURSUIT FBR Client	FBR import to RMS issues with offenses linked to names	When multiple offenses of the same offense code or multiple offenses of the same UCR code are reported in a single incident and linked to multiple victims the import is not keeping or making the connections to the correct victim\suspect. If there are 2 assault charges with different weapons and victim 1 is linked to offense 1 and victim 2 is linked to offense 2 when the import comes in both victims are linked to the first offense, when the UCR codes are the same.
3.	1-8PVTJ5	inPURSUIT FBR Client	Associated offenses	In FBR under suspect\victim sections, there is no way for the users to differentiate between offenses if there are multiples of the same charges\description. There may be reports where there are multiple charges but the first charge is completed and the second charge is attempted on the same report with multiple victims or suspects. When you try to link the correct offense with the victim\suspect there is no way to tell which charge is which.
4.	1-9686KV	inPURSUIT FBR Client	Validation error returned on hidden Height field in Victim section	A validation error ('field height inches must be less than 12') is returned on a hidden height field under the Victim tab. When the Victim information was pulled back, the data went into a hidden field and subsequently would not validate. User had to delete victim and re-enter the information manually.

inPURSUIT FBR 07.07.02 Issues Resolved

	CR #	Product	Summary	Description / How to Reproduce
5.	1-97EODO	inPURSUIT FBR Client	FBR Incident Supplement Victim Involvement Issue	When users submit an incident supplement with additional suspects and victims, the involvement number for victims does not follow the same sequence as the suspects. It gets renumbered as 1, 2. Users are unable to pick all of the victims' names because the same number has been used.
6.	1-9A9LBL	inPURSUIT FBR Client	Incident records with valid address do not appear to be valid in FBR	When using the CAD Search in FBR to bring in a CFS with a valid location, the valid checkbox is not being checked.
7.	1-99UJIK	inPURSUIT FBR Server	Code Sync issue	Every time the code sync occurs, multiple message boxes can appear. Need to be able to limit this warning to a single instance. Ex. For every evidence item that is listed on the FBR form and has a category selected it gives me a pop-up window "Change Category" with text "If you change the category you item data will be lost. Do you wish to continue?" with a "Yes or No" option. I cannot do anything in the FBR until I clear all of the pop-up windows. This is a problem that it is happening and then with the sync being every 60 seconds I cannot complete anything on my form as I keep having to spend time clearing the pop-ups. For Example: If I have five evidence items listed, four with categories, one without, I will get four pop-up windows. When I add a category to the fifth item, I get five pop-up windows. It appears to be resetting the codes
