

## PRODUCT OVERVIEW

Hexagon Safety & Infrastructure®'s Intergraph® Security (I/Security) suite adds automatic detection, assessment, and response capabilities to its Intergraph® Computer-Aided Dispatch (I/CAD) system for multi-agency, multi-jurisdictional coordination and response. The solution suite incorporates real-time incident and resource management with video, sensor, alarm, and external data management into a single, streamlined common operating picture. An open, interoperable platform, I/Security integrates, correlates, analyzes, and interprets feeds from disparate sensors and systems to provide situational awareness for all users, including security operators, dispatchers, command and control center personnel, supervisors, and management.

Agencies can deploy the I/Security solution independently of I/Dispatcher in enterprise environments where a scalable, flexible, and high-availability solution is required. A web-based platform also allows for remote monitoring and control. I/Security works in conjunction with Intergraph InService® for utilities.

## VALUE PROPS

I/Security offers three different user experiences:

- I/Security Command Center® includes the product suite that makes up the full-featured, multi-screen I/Security desktop software. This is our traditional user experience that launches within I/Dispatcher or independently of I/CAD.
- I/Security Command Portal® is our browser-based product that extends capabilities of the desktop client to a web environment and provides access to live operational video, alarm, and sensor data through web browsers. It runs on desktop PCs, laptops, and tablets, and is a true thin-client solution that requires no pre-installed client software.
- Intergraph Video Responder is our video-only interface for use with I/Dispatcher.

Video Responder automatically links live video streams to CAD events, allowing an investigation to start while the incident is underway. The technology helps dispatchers assess situations accurately and send appropriate resources during an incident. It also provides a real-time visual of the scene or perpetrator, which allows dispatchers to provide better information to officers before they arrive at the scene. The product leverages award-winning video technology to enhance situational awareness and aid first responders and incident commanders.

## VERSION OVERVIEW

Command Center 9.4 updates for Q1 2018 allow users to merge suppressed targets and leverage video playback enhancements, including playback at reduced speeds, playback of synchronized feeds from multiple sources, and playback of live video in floating windows on several cameras simultaneously.

Command Portal 9.4 updates include the ability to play archived video and video clips at reduced speeds, merge suppressed targets, and provide enhanced security measures to manage Command Portal website users.

With the Command Portal 9.4 release, users can manage the life cycle of moving targets on the map and in a tabular list view, with capabilities like those provided in I/Sensor and Command Center. Agencies can track and assess friendly objects and potential threats with cameras on the map. They can also classify objects and threads as friendly or foe and associate them with system alarms.

Video Responder 9.4 is compatible with I/CAD and I/Security versions 9.4. Enhancements include ONSSI Ocularis Video SDK 5.4 and Reprise licensing support.

## KEY ENHANCEMENTS SUMMARY

### I/Security 9.4 Q1 2018 release:

- I/Sight and Command Portal can play video at reduced speeds and synchronize multiple views on an external monitor.
- The geospatial monitor map supports live video in floating windows on several cameras simultaneously, allows users to customize messaging in the thumbnail control, and displays icons for different cameras.
- Command Portal allows users to play archived video at reduced speeds and update device location in the Access Control Adapter.
- Incorporates MergeSuppressTargets functionality for both Command Center (I/Sensor) and Command Portal.
- Additional security measures manage a SecurityWeb user for the Command Portal website.
